

Resource Allocation				
	Credit Name	Attempting	Credit Intention	Credit Requirements
Energy	RA2.1 Reduce Operational Energy Consumption	Yes	Conserve energy by reducing overall operational energy consumption throughout the project life.	Establish baseline energy use for the existing project areas. Provide energy model with reduction in energy use in completed project.
	RA2.2 Reduce Construction Energy Consumption	Yes	Conserve resources and reduce greenhouse gases and air pollutant emissions by reducing energy consumption during construction.	Review construction activity for identification of potential energy reduction. Document energy conservation strategies used in construction.
	RA2.3 Use Renewable Energy	No	Meet operational energy needs through renewable energy sources.	Document expected annual output of renewables. Provide breakdown of sources of renewable energy.
	RA2.4 Commission & Monitor Energy Systems	No	Ensure efficient functioning and extend useful life by specifying commissioning and monitoring of energy systems.	Does the project use advanced integrated monitoring systems? List of equipment to be commissioned and level of commissioning.
